**Crane operator
competency
training in the
safe use and
maintenance
of industrial
cranes**

**Competency training to
support compliance
to AS 2550.1-2011
and various workplace
safety regulations**

Industrial Crane Training offers standard training courses or tailored solutions for crane operators, team leaders and maintenance personnel.

Occupational Health and Safety legislation places responsibility on employers to provide information, instruction, training and supervision to employees to enable them to perform their work in a manner that is safe and without risks to health.

As well as complying with the various state government regulations governing the use of cranes, hoists and winches, companies also seek to:

- reduce lost time injuries
- avoid near misses,
- improve operating uptime, and
- avoid damage to machinery.

We have over 45 years experience in the design, manufacture, installation and servicing of industrial cranes and equipment.

Our experience tells us that having employees properly trained in crane safety, usage and preventative maintenance is essential to improving productivity and minimising incidents in the workplace.

Our Industrial Crane Training courses cover

- Pre-operational checks
- Safe operation of equipment
- Identifying and reducing site hazards
- Safe carrying, lifting and moving loads
- Incident reporting
- Safe maintenance practices.

Overview

Industrial Crane Training's competency training courses are designed to upskill operations, production and maintenance personnel in the safe usage and maintenance of industrial cranes.

Our training programmes focus on the safe operation, maintenance, and inspection of industrial cranes and hoists.

The training is not manufacturer-specific, so is ideal for companies wanting competency training for their production and operation teams who operate common brands of overhead, bridge or jib cranes, as well as monorails and fixed point hoists.

Course format

Our training courses work with small groups of production or operations employees to specifically address industrial crane safety.

Using practical workshops, small group discussions and where appropriate, team leader role plays, the trainers focus on providing practical skills such as:

- The do's and don'ts of pre-operational checks and equipment operation
- Identifying and reducing site hazards
- What to do if something doesn't look, feel or sound right
- Safe operation of equipment
- Safe carrying, lifting and moving loads (within rated capacity)
- Incident reporting
- Safe maintenance practices.

The course is non-accredited and does not cover any situations that require operators to make rigging or dogging decisions

Who should attend?

Our courses are designed for both experienced as well as newly appointed operations, production and maintenance personnel.

Customised training

Any of our standard courses can be customised to meet your specific needs.

We can tailor courses to mirror your standard operating procedures and include examples relevant to your industry.

Why use us?

Industrial Crane Training Australia is a division of Redfern Flinn Lifting Equipment which has over 45 years experience in supplying, operating, servicing and supporting industrial cranes in Australia.

With strong relationships with crane component manufacturers (including GIS AG, GH Cranes and Feltes Gantry Cranes); combined with Redfern Flinn's wide experience, we are able to provide the technical expertise, facilitation and support required to design and deliver on-the-job industrial crane training.
